

### TECHNICAL DATA

**Operating range:** from 0.4 to 3.3 m<sup>3</sup>/h with head up to 6.9 meters.

**Liquid temperature range:** from +2 °C to +95 °C.

**Working pressure:** 10 bar (1000 kPa)

**Protection rating:** IP 44

**Insulation class:** F

**Installation:** with horizontal motor shaft.

**Standard power supply:** single-phase 1x230 V ~ 50/60 Hz

**Pumped liquid:** clean, free from solids and mineral oils, not viscous, chemically neutral, close to the properties of water (max. glycol contents 30%).

**in line with the European Directive 2009/125/EC Erp (formerly EuP) and is ready to meet the 2015 Erp requirements (EEI ≤ 0.23).**

### APPLICATIONS

**Low power consumption** pump for circulation of hot water, suitable for all types of domestic heating systems.

### BENEFITS

Thanks to the advanced technology employed, **the permanent magnet synchronous motor**, and the **frequency converter**, the new range of **EVOSTA** circulators ensures high efficiency in all applications, bringing appreciable benefits in terms of energy saving. For this reason, the new, **EVOSTA** circulator, is in line with the European Directive 2009/125/EC Erp (formerly EuP) and is ready to meet the 2015 Erp requirements (**EEI ≤ 0.23**). The circulator features an electronic device that detects the changes demanded by the system and automatically adapts the circulator performance accordingly, always ensuring optimal efficiency and minimum energy consumption.

The **EVOSTA** circulator is also ideal to replace the old three-speed circulators, as it has the same dimensions of the VA series and it can cover with a single model pumps with head of 4.5 and 6 meters. In addition, it is a product that can simplify the user's work, thanks to a single sequential setting button and a breather plug used to degas the system and unlock the motor shaft.

The EVOSTA series circulator can operate in 2 different modes:

- Constant curve

3 curves

- Proportional differential pressure

6 curves

### CONSTRUCTION CHARACTERISTICS

Cast iron pump body and wet rotor motor. Motor casing in die-cast aluminium. Technopolymer impeller. Ceramic motor shaft mounted on graphite bushings lubricated by the pumped liquid. Stainless steel rotor jacket, stator jacket and closing flange. Ceramic thrust ring. EPDM seal rings and brass breather plug. Thanks to the internal protection of the motor, the pump does not require any form of overload protection.
